## Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

Los hechos más importantes de mi carrera científica han ido paralelos a la trayectoria de mi actividad profesional como oncólogo médico. En 1992 me incorporé como oncólogo médico en el Servicio de Oncología del Hospital Universitario Sant Joan de Reus, y desde 1998 soy profesor asociado de Oncología Médica en el Departamento de Medicina y Cirugía de la Facultad de Medicina y Ciencias de la Salud de la Universidad Rovira i Virgili. Como resultado de mi labor clínica y académica, he realizado actividades de investigación en las tres grandes áreas de estudio del cáncer: investigación clínica, epidemiológica y básica-traslacional. En mis 32 años de actividad como oncólogo, he centrado mi investigación clínica en 2 áreas específicas: el cáncer urológico y los linfomas. En este sentido he sido miembro de dos grupos cooperativos nacionales; el Grupo Germinal y el Grupo Oncológico para el Tratamiento y el Estudio de los Linfomas (GOTEL), y mis principales líneas de investigación clínica las he realizado dentro de estos dos grupos cooperativos: Tratamiento adyuvante en seminoma estadio I (Ann Oncol '03, '05 y '14; JCO '05 y '11; Oncología'18: hemos colaborado en cambiar el tratamiento estándar y diseñar un nomograma para la evaluación del riesgo de recaída). Quimioterapia (QT) como alternativa a la radioterapia en el seminoma en estadio II (JCO'08), consiguiendo evitar la radioterapia y sus efectos tardíos carcinogénicos en esta población joven. Importancia pronóstica de la trombosis venosa en tumores de células germinales testiculares (JNCI '17). Tratamiento del linfoma de Hodgkin en estadios tempranos (I-II) con QT exclusivamente evitando, así, segundas neoplasias y cardiopatías relacionadas con la irradiación (Ann Oncol '04). Añadir Rituximab a la QT convencional en el tratamiento del linfoma no Hodgkin folicular: participamos en el estudio multicéntrico internacional del que fui IP en nuestro centro. Sus resultados fueron decisivos para cambiar el estándar de tratamiento en el linfoma folicular, que a partir de este momento pasó a incorporar de forma ineludible este anticuerpo monoclonal (Blood '05 y JCO '08). Consolidación de la respuesta a la QT con inmunoradioterapia con Ibritumomab-Tiutexan-Y-90 en linfomas foliculares (Leuk & Lymphoma '14 y '18). Papel de las células supresoras derivadas de mieloides circulantes y las células T reguladoras como biomarcadores inmunológicos en el linfoma no Hodgkin (J. Immunotherapy of Cancer 2021). En investigación epidemiológica he estado vinculado al Registro de Cáncer de Tarragona como asesor en cáncer hematológico y urológico. Fruto de esta colaboración leí mi tesis doctoral: "Epidemiología de las neoplasias linfoides en Tarragona; 1980-2004", y publicamos "Atenuación del aumento epidémico de los linfomas no Hodgkin en España" (Ann Oncol '10). También dentro del campo de la epidemiología dirigí la tesis doctoral "Epidemiología de las neoplasias malignas de ovario en Tarragona, 1980-2005". En cuanto a la investigación básica y traslacional, mis principales líneas de investigación son el cáncer de mama y ovario hereditario (CMOH), la lipidómica y la metabolómica en cáncer. El significado de Proteínas de Transportadoras de Ácidos Grasos (FABP), el estudio del tejido adiposo peritumoral y el cocultivo de adipocitos con líneas celulares de cáncer de mama son las principales líneas de investigación sobre lípidos y cáncer (Molecular Carcinogenesis 2016; Molecular and Cellular Endocrinology 2017; The Oncologist 2017; Cancers 2021; Cancers 2021). El estudio metabolómico en individuos sanos y pacientes con mutaciones patogénicas o variantes de significación incierta en genes BRCA son los

principales temas de estudio en CMOH (Clinical Genetics 2008; Genetic Testing and Molecular Biomarkers 2009; Cancer Genetics 2016; Clin Traslat Oncol 2018). Sobre este tema he dirigido la tesis doctoral “Aplicación de técnicas ómicas para la mejora del diagnóstico del cáncer de mama y ovario hereditario. Recientemente hemos identificado un perfil metabolómico diferencial entre individuos sanos portadores y no portadores de mutaciones patogénicas en los genes responsables de la reparación por recombinación homóloga del ADN (SEOM '2023). Actualmente estamos llevando a cabo estudios cooperativos de metabolómica en linfomas, cáncer colorrectal y cáncer de pulmón, de los que se han obtenido ya algunos resultados preliminares (Bioinformatics 2021; Cancers 2021). Dos cuerpos cetónicos han resultado ser factores pronósticos de respuesta y de supervivencia en linfomas no-Hodgkin en recaída o refractarios tratados con una segunda línea de QT. Hemos logrado identificar un perfil metabolómico en heces que puede diferenciar los pacientes con cáncer de aquellos sanos o que únicamente presentan pólipos benignos. Responsable del Área de Investigación en Cáncer del IISPV y profesor titular del Departamento de Medicina y Cirugía de la FMCS de la URV (responsable de Oncología Clínica y Hematología).
